

Agile / Scrum / Kanban intro

User Stories / Burndown Charts

Portnov Computer School

Topics

- ▶ **User Stories and Points**
- ▶ **Burndown Charts**
- ▶ **Advantages and Disadvantages of Scrum**
- ▶ **Practice**

User Stories

The background features a series of overlapping, semi-transparent geometric shapes in various shades of blue and teal. These shapes, including triangles and polygons, are arranged in a way that creates a sense of depth and movement, primarily concentrated on the right side of the frame. The overall aesthetic is clean and modern.

User Stories

- ▶ Who, What, Why
- ▶ As a *role*, I want to *action*, (so that *benefit*)

The 3 C's of User Stories

- ▶ Card
- ▶ Conversation
- ▶ Confirmation

INVEST

Good practices of writing user stories

- ▶ Independent
- ▶ Negotiable
- ▶ Valuable
- ▶ Estimable
- ▶ Small
- ▶ Testable

Estimations

The background features a series of overlapping, semi-transparent geometric shapes in various shades of blue and teal. These shapes, including triangles and polygons, are arranged in a way that creates a sense of depth and movement, primarily concentrated on the right side of the frame. The overall aesthetic is clean and modern.

User Story Points

- ▶ Story points are units of measure for expressing an estimate of the overall effort required to fully implement a user story (a product backlog item)
- ▶ Story points are unitless
- ▶ Story points take into account complexity of the work, level of effort, and doubt (risk or uncertainty)
- ▶ Story points may use modified Fibonacci sequence
1,2,3,5,8,13,20

- ▶ Extra materials: [Using the Fibonacci scale in Agile estimation](#)

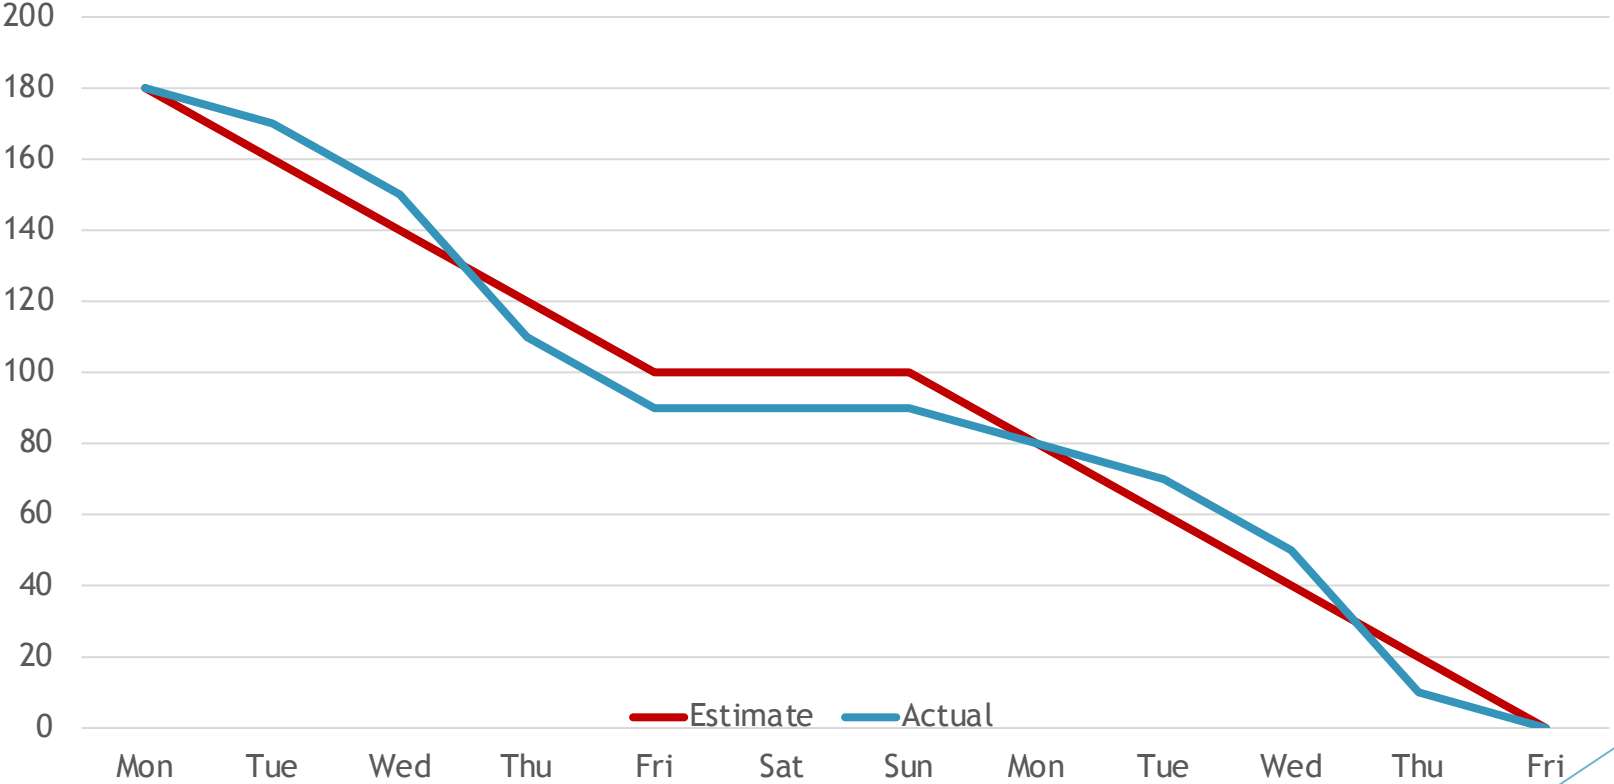

Burndown Chart

Burndown chart

- ▶ A burndown chart shows the amount of work that has been completed in an epic or sprint, and the total work remaining
- ▶ The burndown chart provides a day-by-day measure of the work that remains in a given sprint or release
- ▶ The slope of the graph, or burndown velocity, is calculated by comparing the number of hours worked to the original project estimation and shows the average rate of productivity for each day

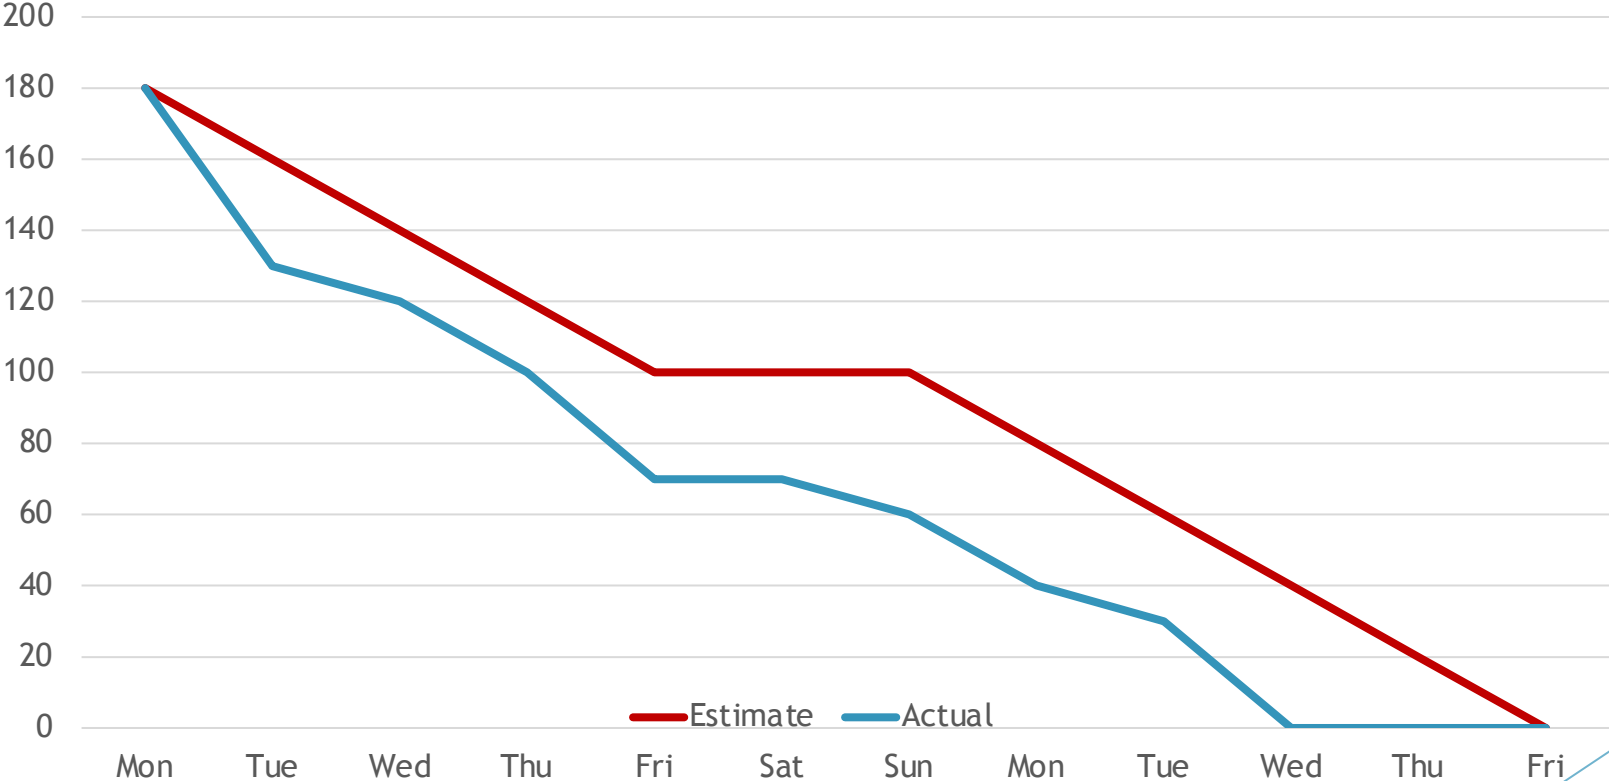

Burndown Chart Examples

Advantages and Disadvantages

- ▶ Quicker release of useable product to users and customers
- ▶ Higher quality
- ▶ Higher productivity
- ▶ Lower costs
- ▶ Greater ability to incorporate changes as they occur
- ▶ Better employee morale
- ▶ Better user satisfaction
- ▶ Being able to complete complex projects that previously could not be done
- ▶ Scrum often leads to scope creep, due to the lack of a definite end-date
- ▶ The chances of project failure are high if individuals aren't very committed or cooperative
- ▶ Adopting the Scrum framework in large teams is challenging
- ▶ The framework can be successful only with experienced team members
- ▶ Daily meetings sometimes frustrate team members
- ▶ If any team member leaves in the middle of a project, it can have a huge negative impact on the project
- ▶ Quality is hard to implement until the team goes through an aggressive testing process
